

SMART

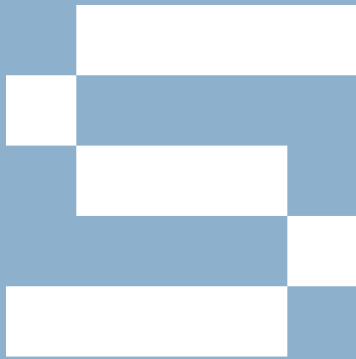

PORTS

PIERS OF
THE FUTURE ■

PIERS OF THE FUTURE.

Technology like big data, automation and artificial intelligence, as well as new values such as transparency and collaboration, are driving profound changes in all areas of the economy. In this context, the notion of the **Smart Port** has been created to provide a more open and efficient model for port and logistics processes, in line with these values.

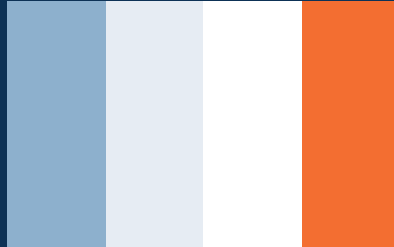

Why?

Implemented and future innovative projects will put environmental, social and economic sustainability within the center of ports. Smart Ports counts with joint forces of:

Artificial Intelligence_

Developing smart ports to create sustainable port services

Summit

Knect365 will be running **Smart Ports Summit Barcelona** in collaboration with the **Port of Barcelona**. The event brings together industry movers and shakers, and key stakeholders from across the supply chain to discuss how to integrate smarter operations, helping to increase sustainability across port and terminal activity.
